How will the quality of soil sample test be ensured?
The State Government will refer 1% of all the samples in a year to a ‘Referral Laboratory’ to analyze and certify on the results of Primary Laboratory. The State Government will be supported to establish ‘Referral Laboratories as required.

What is the payment per sample?
A sum of Rs. 190 per soil sample is provided to State Governments. This covers the cost of collection of soil sample, its test, generation and distribution of soil health card to the farmer.

What is the total outlay of the scheme? Has the scheme been rolled out?
The total outlay of the scheme is Rs. 568.54 crore for a period of 3 years. The scheme has been rolled out in the field during the current year i.e, 2015-16.

How many soil samples will be tested in three years to generate Soil Health Cards?
As per grid pattern adopted by the Ministry, 253 lakh soil samples will be tested every three years to generate approximately 14 crore Soil Health Cards.

Is there any software for generation of uniform soil health cards across the country?
Yes, National Informatics Center (NIC) has developed a web portal (www.soilhealth.dac.gov.in) for generation of uniform soil health card and fertilizer recommendation, which has four modules:
   a) Registration of Soil Samples.
   b) Testing of Samples in Soil Testing laboratory.
   c) Fertilizer recommendation based on Soil Test Crop Response (STCR) equations.
   d) MIS Reports.

Which Division in the Ministry of Agriculture will guide the State Governments regarding implementation of the scheme?
Integrated Nutrient Management (INM) Division; Department of Agriculture & Cooperation will visit the States regularly and provide guidance in technical matters.

Contact details of concerned Central and State Government Officials?

Central Government: Additional Commissioner (INM), Government of India, Ministry of Agriculture, DAC, Krishi Bhawan, New Delhi,
Telefax – 011 - 23384280, E-mail – dwivediv@nic.in

State Government: The concerned State Director of Agriculture/ District Agriculture Officer.

One can visit www.soilhealth.dac.gov.in or www.agricoop.nic.in for information on Soil Health Card Scheme.

Swasth Dhara, Khet Haraa
What is Soil Health Card (SHC) scheme?
It is a Government of India’s scheme promoted by the Department of Agriculture & Co-operation under the Ministry of Agriculture. It will be implemented through the Department of Agriculture of all the State and Union Territory Governments. A SHC is meant to give each farmer soil nutrient status of his holding and advice him on the dosage of fertilizers and also the needed soil amendments, that he should apply to maintain soil health in the long run.

What is a Soil Health Card?
SHC is a printed report that a farmer will be handed over for each of his holdings. It will contain the status of his soil with respect to 12 parameters, namely N, P, K (Macro-nutrients) ; S (Secondary nutrient) ; Zn, Fe, Cu, Mn, B (Micro-nutrients) ; and pH, EC, OC (Physical parameters). Based on this, the SHC will also indicate fertilizer recommendations and soil amendment required for the farm.

How can a farmer use a SHC?
The card will contain an advisory based on the soil nutrient status of a farmer’s holding. It will show recommendations on dosage of different nutrients needed. Further, it will advise the farmer on the fertilizers and their quantities he should apply, and also the soil amendments that he should undertake, so as to realize optimal yields.

Will the farmer get a card every year and for every crop?
It will be made available once in a cycle of 3 years, which will indicate the status of soil health of a farmer’s holding for that particular period. The SHC given in the next cycle of 3 years will be able to record the changes in the soil health for that subsequent period.

What are the norms of sampling?
Soil samples will be drawn in a grid of 2.5 ha in irrigated area and 10 ha in rain-fed area with the help of GPS tools and revenue maps.

Who will draw the soil sample?
The State Government will collect samples through the staff of their Department of Agriculture or through the staff of an outsourced agency. The State Government may also involve the students of local Agriculture/Science Colleges.

What is the ideal time for soil sampling?
Soil Samples are taken generally two times in a year, after harvesting of Rabi and Kharif Crop respectively or when there is no standing crop in the field.

How will soil samples be collected from a farmer’s field?
Soil Samples will be collected by a trained person from a depth of 15-20 cm by cutting the soil in a “V” shape. It will be collected from four corners and the centre of the field and mixed thoroughly and a part of this picked up as a sample. Areas with shade will be avoided. The sample chosen will be bagged and coded. It will then be transferred to soil test laboratory for analysis.

What is a soil test laboratory?
It is a facility for testing the soil sample for 12 parameters as indicated in reply to question number 2. This facility can be static or mobile or it can even be portable to be used in remote areas.

Who and Where will the soil sample be tested?
The soil sample will be tested as per the approved standards for all the agreed 12 parameters in the following way:

i. At the STLs owned by the Department of Agriculture and by their own staff.
ii. At the STLs owned by the Department of Agriculture but by the staff of the outsourced agency.
iii. At the STLs owned by the outsourced agency and by their staff.
iv. At ICAR Institutions including KVKs and SAUs.
v. At the laboratories of the Science Colleges/Universities by the students under supervision of a Professor/Scientist.
